

Vigneshwar

Frontend Developer

Dear Hiring Manager,

I'm a Frontend Developer with 7+ years of experience. At Zoho Corporation, I built scalable and accessible web applications for international markets, including the Japan CRM ecosystem.

I led frontend development for the Japan CRM Academy platform, delivering a fully localized learning system that supported 5,000+ MAU and contributed to ~30% signup growth. My work focuses on React-based architectures, performance optimization, accessibility (WCAG), and internationalization at scale.

Having collaborated closely with cross-functional teams and Japan stakeholders, I bring both technical depth and cross-cultural product experience. I'm particularly interested in contributing to product-driven teams where frontend engineering directly impacts user growth and system quality.

I am open to relocation and prepared to begin the visa sponsorship process.

Thank you for your consideration. I look forward to the opportunity to discuss further. Thank you for your consideration.
